## EDUCATION

---

### University of Waterloo

Bachelor of Applied Science in Computer Engineering, Co-op  
With Distinction - Dean's Honours List

Apr 2019

GPA 3.7

## EXPERIENCE

---

### LinkedIn

Sep 2019 - Present

*Staff Software Engineer - Create (last promoted Mar 2024)*

*New York, NY*

- Tech lead for Create, a team of 25+ engineers improving the quality and quantity of content across LinkedIn. Lead multi-quarter product and infra initiatives alongside strategy and roadmap planning.
- Founding engineer of Creator Analytics; shipped major 0 to 1 product launches used by 2M+ members daily. Core designer and contributor of venture bets, such as Creator Monetization and Agentic Insights.
- Architected a redesign of LinkedIn's analytics platform handling 8B+ events/day (Flink/Beam/Kafka). Drove Principal, Director, VP alignment to influence infra roadmaps, cutting onboarding time by 60%.
- Pioneered heuristic classifiers to build a member segmentation framework that directly influenced CEO strategy and now powers weekly executive reporting, helping elevate Create to a top company priority.
- Designed and executed a zero-downtime Samza to Flink migration across a 130-engineer org, clearing 9+ years of pipeline tech debt, cutting storage costs by 40%, and boosting accuracy by 50%.
- Improved operational excellence through proactive ownership. Authored incident runbooks, reduced infra costs by \$800k+ via capacity planning, and championed AI-assisted development workflows.
- Invested heavily in talent, mentoring 10+ engineers, driving monthly AI-focused workshops for 200+ engineers and partners, and serving as lead reviewer for promotions to senior and staff.

### Jane Street

Sep 2018 - Dec 2018

*Software Developer Intern - Market Data, Core Services*

*New York, NY*

- Developed a selective email rate limiter using OCaml that detected and rate limited low-priority emails
- Created a command-line tool to heuristically select and fuzzy-search a representative set of securities

### LinkedIn

Jan 2018 - Apr 2018

*Software Engineering Intern - Content Analytics*

*San Francisco, CA*

- Developed systems to find data anomalies in batch and stream processing systems using Pig and Python
- Introduced an aggregation flow, reducing storage costs and increasing data retention by over 12x

### Microsoft

May 2017 - Aug 2017

*Software Engineering Intern - Office 365*

*Mountain View, CA*

- Implemented a data abstraction layer in C# that allows storing data on multiple database backends
- Researched the limitations of multiple NoSQL database services and built serializers to handle variances

### Shopify

Sep 2016 - Dec 2016, Jan 2016 - Apr 2016

*Developer Intern - Mobile Shopify*

*Ottawa, ON*

- Enhanced the internal query and caching framework for Android to handle errors and retries using Java
- Improved an algorithm to heuristically extract prominent colours from images and apply them to views

## SKILLS

---

- Proficient in Java, prior experience in Scala, C#, OCaml, Python, C, C++, Ruby (on Rails), SQL
- Spark, Flink, Samza, Hadoop, Kafka, Beam, Airflow, Git, GraphQL, UNIX, Iceberg, Claude Code
- HDFS, Pinot, MySQL, Azure Cosmos DB, Couchbase
